WHAT IS CLAIMED IS:

1. A fastening member, comprising a root portion, and a driven portion, wherein:

the root portion has a first end and a second end, the root portion has a mediate portion formed with two elongated slots; and

the driven portion has an end extended from the first end of the root portion.

2. The fastening member in accordance with claim 1, wherein the root portion is a sheet plate.

3. The fastening member in accordance with claim 1, wherein the root portion has a first face formed with a convex arc-shaped surface and a second face formed with a concave arc-shaped surface.

4. The fastening member in accordance with claim 1, wherein each of the two elongated slots is extended along a longitudinal direction of the root portion.

5. The fastening member in accordance with claim 1, wherein the root portion has two opposite sides each formed with a ratchet portion.

6. The fastening member in accordance with claim 5, wherein the ratchet portion of each of the two opposite sides of the root portion is directed toward the first end of the root portion.

7. The fastening member in accordance with claim 5, wherein the second end of the root portion has two opposite sides each formed with an

inclined face having a first end located adjacent to the respective ratchet portion, an oblique blade having a first end extended from a second end of the inclined face, and a tip extended from a second end of the oblique blade.

8. The fastening member in accordance with claim 7, wherein the inclined faces of the two opposite sides of the second end of the root portion have a width smaller that that of the root portion.

9. The fastening member in accordance with claim 1, wherein the driven portion has a planar shape.

10. The fastening member in accordance with claim 1, wherein the driven portion is vertical to the root portion, so that the root portion is combined with the driven portion to form a substantially L-shaped body.
